

Quantum Engineering Curriculum

Sprint 1 Quiz

Instructions: Answer without running code unless the question explicitly asks you to. Explain your reasoning where appropriate.

1. What is a qubit?
2. How does a qubit differ from a classical bit?
3. What happens when a qubit is measured?
4. What is the default state of a newly created qubit in Qiskit?
5. Write a minimal Qiskit program that creates one qubit and measures it (imports not required).
